

Optech Announces Rapid Mobilization Platform for Lynx Mobile Mapper

Toronto, Canada, September 27, 2011 — Optech Incorporated, the world's leading manufacturer of advanced lidar and camera survey instruments, is pleased to announce a new lightweight, state-of-the-art mounting platform for its Lynx Mobile Mapper.

The newly designed rack features rigid mounting points and latching that virtually eliminate any slippage or vibration, ensuring consistent survey results and increased repeatability. The lightweight but durable enclosure with sealed thermal windows protects the sensors from inclement weather, temperature extremes, high humidity and dust, thus contributing to long-term performance reliability. Lynx Mobile Mapper owners will appreciate how easy it is to install, and the fact that it is backwards-compatible with earlier models.

Daina Morgan, Product Manager for the Lynx Mobile Mapper, says, "Lynx customers were looking for high portability and repeatability, and Optech has answered their needs with a smaller, lighter and portable mounting platform. While maintaining modularity and serviceability, we were able to improve the ease of sensor mounting, array box mobilization, demobilization, accuracy and repeatability. The new format allows for quick installation and deployment but still lets users define their own unique sensor and camera configuration."

About Optech Incorporated

Optech is the world leader in the development, manufacture and support of advanced lidar and imaging-based survey instruments. With operations and staff worldwide, Optech offers both standalone and fully integrated lidar and camera solutions in airborne terrestrial mapping, airborne laser bathymetry, mobile mapping, mine cavity monitoring, and industrial process control, as well as space-proven sensors.
